## BENCHMARK SHELVING

All bookcases are available as starters or adders. A starter has two end panels and can be a stand-alone unit; an adder has only one vertical panel. Units come in as starters by default; use the "Starter or Adder" feature in the green option box to change a starter to an adder. Benchmark adders simply snap to starters or each other to build a shelving run. Always start with a starter and snap adders to it. While it's possible to snap several adders together and then convert the first to a starter, that would result in a run that looks OK but will actually be 1" short since the edge of the first adder would penetrate the end panel of the starter.

BENCHMARK (11 SERIES) SHELVING:

V11-4812
STARTER

Starter or Adder   Starter

V11-4812A
ADDER

Starter or Adder   Adder

V11-4812A
ADDER

Starter or Adder   Adder
